

### A03 Project Description

Jesus Otteson

Tyler Hall

Melissa Clark

Alex Brewster

Daniel Ortega

Jeremy Jacobson

John Perry

Leon Tran

In this project we will be creating a mobile web based application that will provide the user will recommendations on where to eat.

The user, when they first open the app, will be prompted to either choose a category of food (e.g. Indian, Mexican, Italian, American), or they can select "I don't know". If they were to select a category, they will be presented with popular options on where to eat based on their category, after the selections are made the information will be uploaded to a web server and they will be presented with options where they can then order food. If the user were to select "I don't know" the app will pull information from a web server and they will be presented with options on where to eat based on their age, location, and the time of day.

The information sent to the user will a collection of data collected from other users that use the app. Recommendations will be sent based on popular choices by users of their age, near their location, and choices made at their current time and date.
