Exercise Big-O:

```
public static void methodA(int n)
                                                                 0(1)
   int count = 0;
   for(int i=0; i<20000; i++)
      count++;
   }
public static void methodB(int n)
                                                                   0(n)
   int count = 0;
   for(int i=0; i<n; i++)</pre>
      for (int j=0; j<100; j++)
         count++;
   }
public static void methodC(int[] a)
                                                                   0(n)
  int result = 0;
int n = a.length;
   for (int i=0; i < n; i++)
      result = result + a[i];
   }
}
```

```
public static void methodD(int[][] a)
      int result =
                                                                   0(n<sup>2</sup>)
       int n =
0;
a.length;
   for (int i=0; i < n; i++)
      for (int j=0; j < i; j++)
         result = result + a[i][j];
   }
public static void methodE(int n)
                                                                     0()
   int count = 0;
   for(int i=0; i<n; i++)</pre>
      count++;
   for (int j=0; j<n; j++)</pre>
      count++;
   }
public static void methodF(int[] a)
      int result =
                                                                   O(n^2)
       int n =
a.length;
   for (int i=0; i < n; i++)
      result += doSomething(a, i);
private static int doSomething (int a[i], int n)
   int result = 0;
   for (int i=1; i < n; i++)
      result += a[i] * n;
   return result;
}
```
